It appears the web site I originally obtained the data for these pdfs is no longer available. It was a very promising website since it appeared to collect permission from authors to upload and post the complete content of their books. The website is down and I don't know the reason why (copyright violation??) I am replacing this pdf with a set of notes I created in the same spirit as the original content of the book "Black Art of 3D Game Programming" in order to avoid any problems. I created the original files with the understanding that the information was in the public domain.

Please visit: http://www.brainycode.com/retro.html for the replacement pdf and information.

Thanks,
